Database Quick Set Up with Docker and pgAdmin Guide

1. Install **docker**

2. In the terminal:

   $ docker run --name postgres-tscd -p 5432:5432 -e POSTGRES_PASSWORD=XXXXX -d XXXXX

3. Install **pgAdmin**

4. Create a profile (add password)

5. Create a server

6. Set password to "XXXXX"

7. Set name to "XXXXX"

8. Set host to "localhost"

9. Set server to 5432

10. In the terminal:

    To start:
    $ docker container start postgres-tcd

    To stop:
    $ docker container stop postgres-tcd

11. Connect to database with an ORM (TypeORM recommended)
